

Company Data Archive

Maximize your Microsoft Dynamics® GP Output

Easily Reduce the Size of your GP Database

Company Data Archive (CDA) provides an easy way to move historical information from your Microsoft Dynamics GP 'live' company to an 'archive' company. An easy-to-use interface allows you to select an archive date as well as the modules you would like to archive.

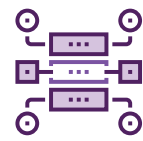

Why Archive?

Increase performance while posting, running reports, etc.

Enable faster upgrades & backups - less data = less downtime

Easily view historical data with cross-company inquiries

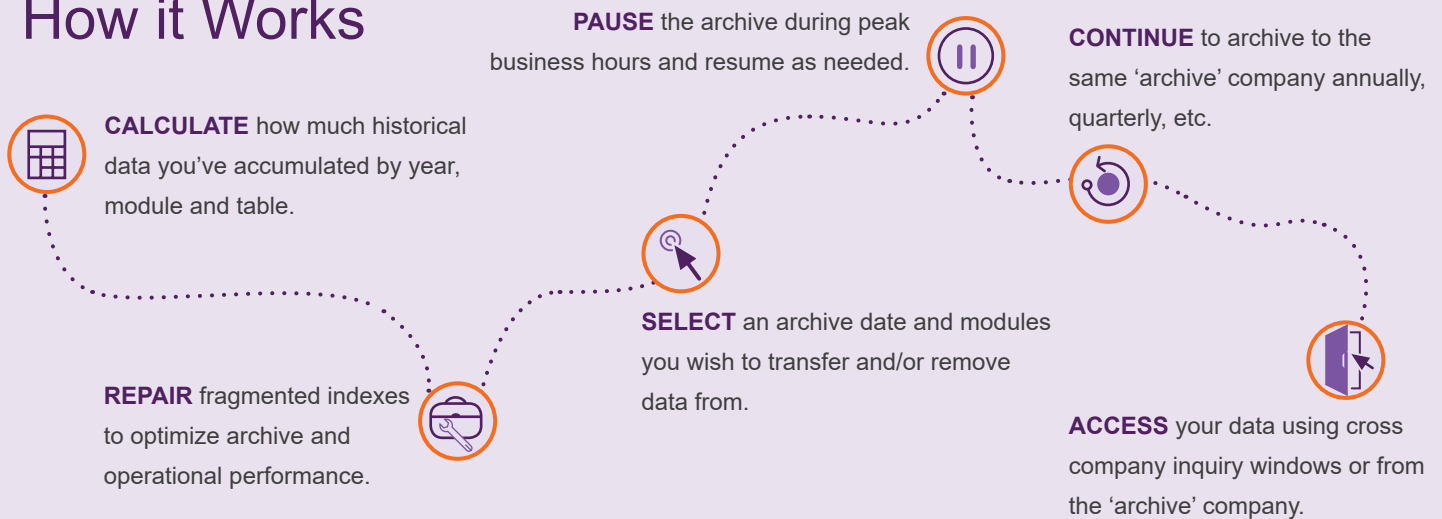

Streamline data by eliminating clutter in lookups, inquiries & reports

Reduce hardware costs & optimize disk space

How it Works

What's Included?

CDA Plus provides a means to archive 3rd party and non-core modules beyond core Microsoft Dynamics® GP. Using the CDA Plus API, customers (or partners) can develop add-ins to archive additional transaction related data for the custom solution(s) stored in the Dynamics GP database. CDA Plus also has the ability to move data to a separate SQL Server (linked server archiving) and data can be archived in user-defined groups of customers or vendors.

*CDA Plus is an add-on to CDA Professional.

**Some procedures for 3rd party and non-core modules may not exist. Contact Professional Advantage for information on existing stored procedures.

	CDA FUNCTIONALITY	INCLUDED
CDA PROFESSIONAL	Cross Company Inquiry	○
	Database Size Report	○
	Index Fragmentation Report	○
